Pooja Chande

Senior Python Developer | Vue.js | Django | FastAPI

poojachande22@gmail.com | 9099557485 | Gujarat, India | linkedin.com/in/poojachande

PROFILE

Senior Python Developer with 4.7 years of experience building enterprise applications and scalable backend systems using Python, Django, FastAPI, and REST APIs, including hands-on production Vue.js development. Delivered end-to-end feature modules spanning UI components, API integration, backend services, and database workflows on a US healthcare platform, alongside microservices, asynchronous processing, and cloud deployment experience. Additional exposure to AI/ML integration, testing, and CI/CD.

CORE SKILLS

Backend & Frameworks: Python, Django, Django REST Framework (DRF), FastAPI, REST APIs, Microservices, API Integration, Celery, Celery Beat, Redis

Frontend: Vue.js, Vuex, Vue Router, JavaScript, HTML5, CSS3, Bootstrap Vue, React

Databases: PostgreSQL, MySQL, SQL, SQLAlchemy, Alembic

Cloud & DevOps: AWS EC2, AWS Lambda, AWS SageMaker, Docker, Kubernetes, Jenkins, CI/CD, Kafka, Nginx

Data & ML: Pandas, NumPy, Scikit-learn, OpenCV

Testing & Quality: Pytest, Unit Testing, Code Review, OWASP Security Standards

Tools & Collaboration: Agile, Git, GitHub, GitLab, JIRA, Postman, Swagger/OpenAPI, Mentoring

PROFESSIONAL EXPERIENCE

Senior Python Developer, MSBC Group *08/2025 – 05/2026 | Ahmedabad, Gujarat*

- **Owned** end-to-end backend development for a multi-tenant hospitality platform built on Django microservices architecture, independently delivering 5 production-grade microservices and 70+ REST APIs.
- Designed and developed scalable microservices for authentication, hotel operations, notifications, workflow automation, and API integrations, ensuring secure tenant isolation and maintainable architecture.
- Engineered asynchronous processing using Celery, Celery Beat, Redis, and Kafka to automate weather integrations, notifications, and scheduled workflows.
- Managed QA and production deployment support with Jenkins across Kubernetes-based QA environments and AWS EC2 production servers, including troubleshooting, deployment validation, and issue resolution.
- Enforced OWASP security standards, optimized backend performance, collaborated with AI engineers to integrate chatbot services via REST APIs, and built CLI scaffolding tools for Django/FastAPI to accelerate engineering productivity.

Solution Developer, Innovya Technologies *04/2023 – 06/2025 | US (Remote)*

- **Owned** the Facilities, Chains, Services, Appeals, and Cases modules end-to-end on RevKeep, a US healthcare audit and monitoring platform — building reusable Vue.js components with Vuex for state management, Vue Router for navigation, and props/emit plus provide/inject for component communication.
- Worked across both Options API (legacy modules) and Composition API (modernized modules) while contributing to backend modernization of RevKeep's legacy CakePHP application, designing and deploying 30+ REST APIs using FastAPI and Django REST Framework.
- Integrated machine learning models into backend applications through scalable REST APIs, reducing prediction latency by 40% while supporting production business workflows.
- Improved code quality by refactoring legacy codebases and raising test coverage by 25% through modularization and Pytest-based unit testing; maintained GitHub repositories and CI/CD pipeline configuration.
- Built a US financial-market prediction application with Python-based data visualization interfaces (see Projects); collaborated with frontend and cross-functional teams to deliver end-to-end product features in Agile environments.

Python Developer, Arkay Apps *01/2022 – 03/2023 | Kutch, Gujarat*

- Developed scalable backend applications using Django and FastAPI, delivering CRUD APIs for web and mobile platforms with optimized database performance.
- Built 10+ modular API modules using FastAPI and SQLAlchemy ORM, integrating third-party services (email, SMS, payments) across construction/property, trust/event, and maritime-industry workflows.
- Optimized PostgreSQL/MySQL queries and ORM models, reducing database call time by 30%; implemented JWT authentication, role/operation-level authorization, and Alembic migrations.
- Wrote and maintained technical documentation for internal APIs and data workflows; conducted peer code reviews and mentored junior developers on Django best practices and Git workflows.

Assistant Professor, KSKV Kachchh University *02/2014 – 07/2021 | Kutch, Gujarat*

- Delivered undergraduate courses in Python, C++, DBMS, Networking, and Software Engineering; mentored 3,000+ students and guided 20+ full-stack/Python academic projects.
- Served as Head of Department (BCA), managing academic operations, examinations, and professional development for 300+ students.

SELECTED PROJECTS

AI-Based Real Estate Valuation System — Python | Django | PostgreSQL | Scikit-learn

- Built a Django-based prediction system estimating property values from location, area, materials, and cost parameters.
- Applied feature engineering with Pandas, StandardScaler, and PolynomialFeatures; evaluated Random Forest, SVR, Ridge, Lasso, and KNN models.
- Integrated the ML workflow with Django ORM and REST APIs for application-level valuation predictions.

Temple Trust, Events & Resource Management Platform — Python | FastAPI | SQLAlchemy | MySQL | Alembic | React

- Developed backend services covering trusts, trustees, memberships, services, donations, and operational resources.
- Built REST APIs with FastAPI and SQLAlchemy for CRUD, search, filtering, pagination, and sorting; implemented JWT auth and role-based authorization.
- Added document/media handling and PDF generation, supporting a React frontend via REST APIs.

Image-Based Painting Recommendation System (SOAL) — Python | CNN | AWS SageMaker | AWS Lambda

- Contributed to backend development of an image-similarity recommendation system for an artwork marketplace using CNN-based image feature analysis.
- Developed and deployed serverless APIs on AWS Lambda, supporting model inference workflows via AWS SageMaker.

US Capital Market Prediction Application — Python | Tkinter | PyQt | Kivy | Streamlit

- Built Python desktop and web interfaces for a US financial-market prediction application, including candlestick-chart visualizations of market data.
- Explored multiple Python GUI/visualization frameworks (Tkinter, PyQt, Kivy, Streamlit) to prototype and compare data-presentation approaches.

EDUCATION

B.E. (Information Technology), Atmiya Institute of Technology & Science (GTU) — 7.43 CGPA — Rajkot, Gujarat — 2013
